

SOLUTION ACCELERATORS

SmartStart: Performance™

Track, analyze, and optimize production performance in real-time.

Ready to Run

Preconfigured templates designed to track major processes and events.

Hardware Agnostic

Connects to any PLCs, sensors; no custom programming required.

Flexible and Scalable

Add process areas, work-cells, use cases, and new features as needed.

You understand that digitizing operational data — process, product, quality and performance information — is key to driving operational excellence. You also know, however, that you have no appetite for a large manufacturing operations management (MOM) project with an uncertain outcome.

Now you can implement a performance management solution without the complexity of a custom project. Our SmartStart: Performance solution gives you everything you need — including award-winning TrakSYS™ MOM software, our proven implementation process, training, and support — to track, analyze, and optimize production in real-time.

Leveraging advanced analytics and automation, SmartStart: Performance provides deep insights into Overall Equipment Effectiveness (OEE) and other vital metrics such as machine uptime, cycle time, and yield.

Key Benefits:

- Visibility across production
- Increased yield and capacity
- Quality improvements
- Data-driven decisions
- Reduced compliance risk
- Materials traceability

What Makes SmartStart Solutions, well, Smart?

SmartStart is our proprietary process for ensuring you get the right solution to suit your needs.

Every SmartStart solution begins with a standard framework and, based on your answers to a series of key questions, we tweak the solution for your operation.

From strategic planning to performance, quality, inventory, and more, SmartStart solutions are designed to drop into your operation smoothly and quickly, giving you new capabilities without the need for a custom project. (Of course, if you want to customize, we can help with that too!)

The Performance Management You Need Today, Tomorrow, and Beyond

While providing extensive out-of-the-box features, the platform and tools used in SmartStart: Performance are easily configurable, extensible, and scalable, ensuring your system will be able to meet the needs of your data-driven operation today, tomorrow, and beyond.

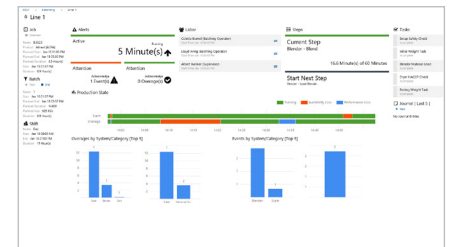

Line Overview

Real-time monitoring, analysis, and optimization of activities on a particular production line ensures efficiency, quality, and throughput. Set and track KPIs, such as OEE, cycle time, downtime, defect rates, and more.

Batch Management

Ensure that each batch is produced according to specified recipes, formulas, or procedures. Track critical information such as raw material lots, process parameters, production times, and operator actions for each batch.

Historian

Capture continuous data such as temperatures, pressures, flow rates, and machine states at high frequency. Maintain detailed operational records for compliance, quality assurance, and performance improvement.

SmartStart: Performance - Level 1

Cost: \$48,500

Key Capabilities:

- OEE
- Uptime/downtime/Availability
- Historian
- Flow of liquids, air
- Power consumption
- Throughput/Yield
- Good/bad count

Key Deliverables:

- 1 VM, MES Software (2 users)
- OEE of 5 machines/lines
- 1 PLC connection
- Requirements workshop
- System documentation
- 'Lean' program guide
- Training and launch support
