

SOLUTION ACCELERATORS

SmartStart: Quality™

Detect defects, ensure compliance, and drive continuous improvement.

Ready to Run

Preconfigured templates designed to track and analyze quality.

Hardware Agnostic

Connects to any PLCs, sensors; no custom programming required.

Flexible and Scalable

Add process areas, work cells, use cases, and new features as needed.

Quality is paramount in your operation, of course. But managing quality in a complex production environment can seem overwhelming. It doesn't need to be.

Now you can implement a quality management solution without the complexity of a custom project. The SmartStart: Quality monitoring solution empowers you to detect defects, ensure compliance, and drive continuous improvement across production lines.

Our SmartStart: Quality solution gives you everything you need — including MES software, our proven implementation process, training, and support — to manage quality in real-time. Using real-time production data with AI-powered analytics, SmartStart: Quality helps you ensure consistency, maintain traceability, and meet regulatory standards.

Key Benefits:

- Quality improvements
- Visibility across production
- Increased yield and capacity
- Reduced compliance risk
- Data-driven decisions
- Materials traceability

What Makes SmartStart Solutions, well, Smart?

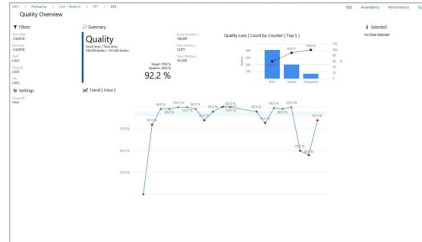

SmartStart is our proprietary process for ensuring you get the right solution to suit your needs.

Every SmartStart solution begins with a standard framework and, based on your answers to a series of key questions, we tweak the solution for your operation.

From strategic planning to performance, quality, inventory, and more, SmartStart solutions are designed to drop into your operation smoothly and quickly, giving you new capabilities without the need for a custom project. (Of course, if you want to customize, we can help with that too!)

Effective Quality Management Out of the Box, and Beyond

While providing extensive out-of-the-box features, the platform and tools used in SmartStart: Quality are easily configurable, extensible, and scalable, ensuring your system will be able to meet the needs of your data-driven operation today, tomorrow, and beyond.

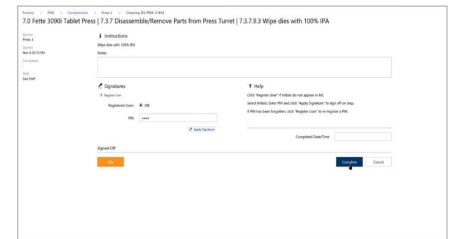

Quality Management

Manage workflows, SOPs, rules, tasks, and analytics. Record your process-related, data, defects, waste, yield, and observations. Involve your stakeholders in corrective actions to ensure continuous improvement.

Electronic Records

Streamline batch records creation. Utilize badge scanning or pin numbers for operator verification. Comply with regulatory requirements. Provide 21 CFR Part 11 electronic signatures, with a full audit trail of batch activity.

A screenshot of a web-based form for creating an electronic batch record. The form is titled "7.2 Filter 3000 Tablet Press | 7.3.7 Disposable/Reusable Parts from Press Turnout | 7.3.7.3.3 Wipe dies with 100% IPA". It contains several sections for data entry, including "Substitution", "Equipment", and "Help". There are checkboxes for "Equipment" and "Help", and a "Submit" button at the bottom right.

Statistical Process Control (SPC)

Analyze hazards and critical process control points historically and in real-time. Involve your stakeholders in corrective actions to ensure continuous improvement. Preconfigured variable and attribute data control charts.

SmartStart: Quality - Level 1

Cost: \$49,500

Key Capabilities:

- Quality Management System (QMS)
- Statistical Process Control (SPC)
- AI-enabled defect detection
- Corrective, Preventive Action (CAPA)
- Inspection, audit management
- Traceability, lot tracking
- Reporting and compliance tools

Key Deliverables:

- 1 VM + MES software (2 users)
- Barcode RFID scanner (1)
- Sensor data acquisition modules (5)
- 1 PLC connection
- System documentation
- Training and launch support
