Staffing Services

Empower Your Workforce

ABOUT

InflexionPoint specializes in staff augmentation, offering a range of services designed to enhance your workforce with skilled professionals. Our Contract to Hire program allows you to assess contractors on the job, providing an opportunity to convert them into valuable full-time employees. For urgent requirements, our Emergency Contractors are available to quickly integrate into your projects, ensuring continuity and efficiency. We also offer Time-bound Contractors for projects with specific timelines, maintaining flexibility while protecting your interests.

Our diverse talent pool includes expertise in areas such as Control Systems Engineering, Support Engineering, and Cleaning and Validation. Whether you're looking for standard contractors or need specialized support in response to an RFP, InflexionPoint is equipped to meet your staffing needs with precision and agility. Let us help you augment your workforce with the right talent, enabling you to achieve your business objectives with confidence.

Expert VETTING

Contractors rigorously assessed by InflexionPoint's technical experts.

Quality ENGAGEMENT

Enhanced interaction and superior work quality.

Seamless TRANSITION

Effortless shift from contractor to full-time employee.

Rapid RESPONSE

Swift staff augmentation with on-demand contractor availability.

SUCCESSFUL DEPLOYMENTS

Life Science Company

During the startup and commissioning of a new facility for producing a complex medical treatment, our team identified the need for extra automation engineering support at a separate client facility within the same company. Within just two weeks, we supplied additional engineers who seamlessly integrated with the company's internal team, providing dedicated on-site support for four months. This swift and efficient response ensured that there were no delays in the project, enabling the company to achieve their goals on schedule.

Chocolate Manufacturer

Faced with the challenge of needing local startup engineering support for remote services, a major food company specializing in chocolate manufacturing approached us. We provided an experienced automation engineer skilled in PLC and HMI programming, who seamlessly integrated with their team. This ensured a smooth startup process, allowing the manufacturer to focus on their core operations without any disruptions.

Pharmaceutical Company

A leading pharmaceutical company required full-time on-site support for automation engineering and Manufacturing Execution Systems (MES) engineering. We supplied dedicated professionals who not only met the company's technical needs but also aligned with their operational culture. Both engineers eventually transitioned into full-time employment, demonstrating the success of our partnership in meeting their long-term objectives.

Energy and Utilities Company

To enhance their IT infrastructure, an energy and utilities company sought our expertise in providing an IT professional to ensure their systems met their stringent standards. We delivered a specialist who worked closely with their team, offering tailored solutions to maintain and elevate their IT environment.

Addressing their need for remote network setup and management, we provided the company with an IT professional who efficiently handled their network requirements for about a year. This remote support enabled the company to maintain seamless connectivity and operational efficiency across their systems.
